Trading app designed for AI

What?

A trading platform built for AI as much as for humans. People can chart, test and trade through it, while AI can automate a strategy end to end: designing it, testing it and running it live.

How?

● Local Data

Market data is stored locally and recorded non-stop.

● Engine

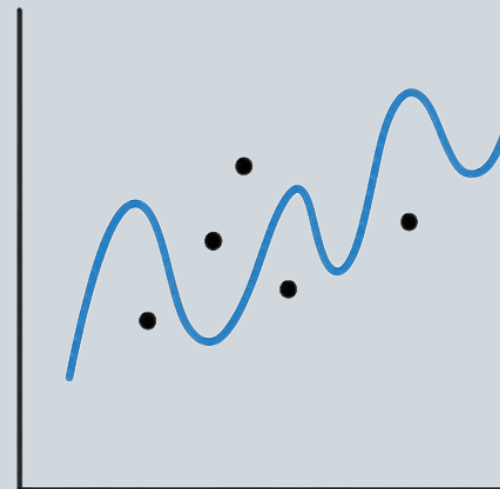

A backtest engine that behaves exactly like live trading.

● Testing

Every strategy is tested rigorously on data it has never seen.

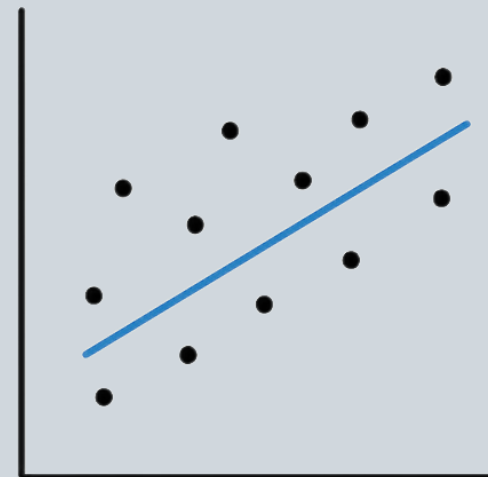

Supervised by AI

Not so easy

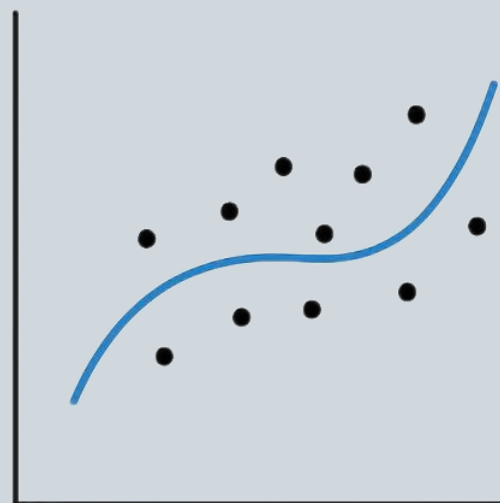

Better not **overfit**

Tests look amazing, but the strategy fails in real trading.

Neither **underfit**

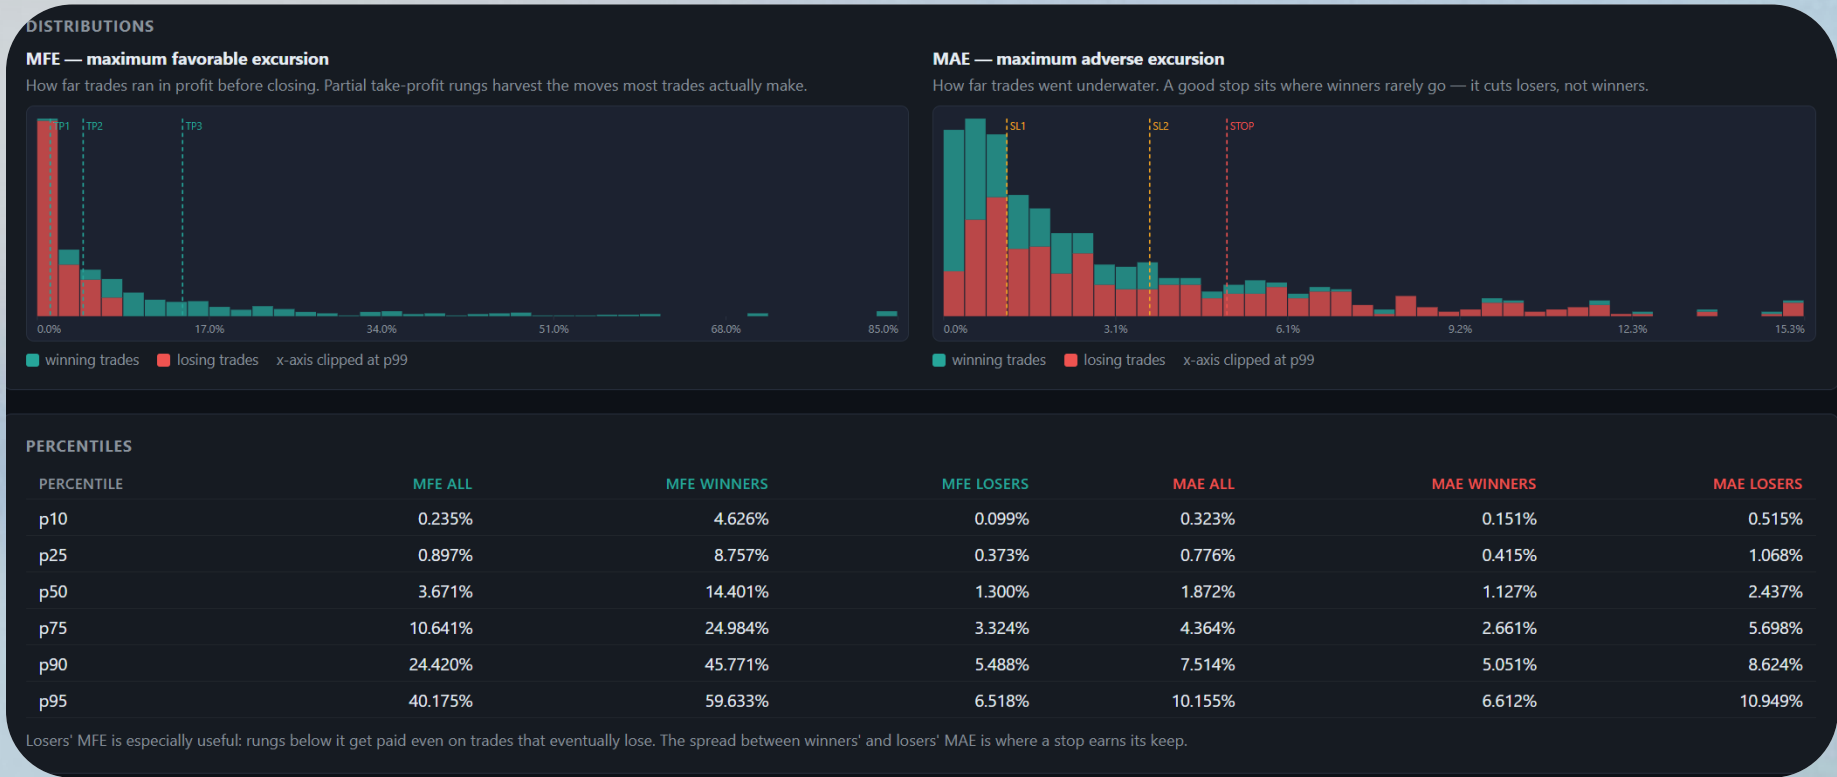

The strategy is too simple and leaves profit on the table.

For **perfection**

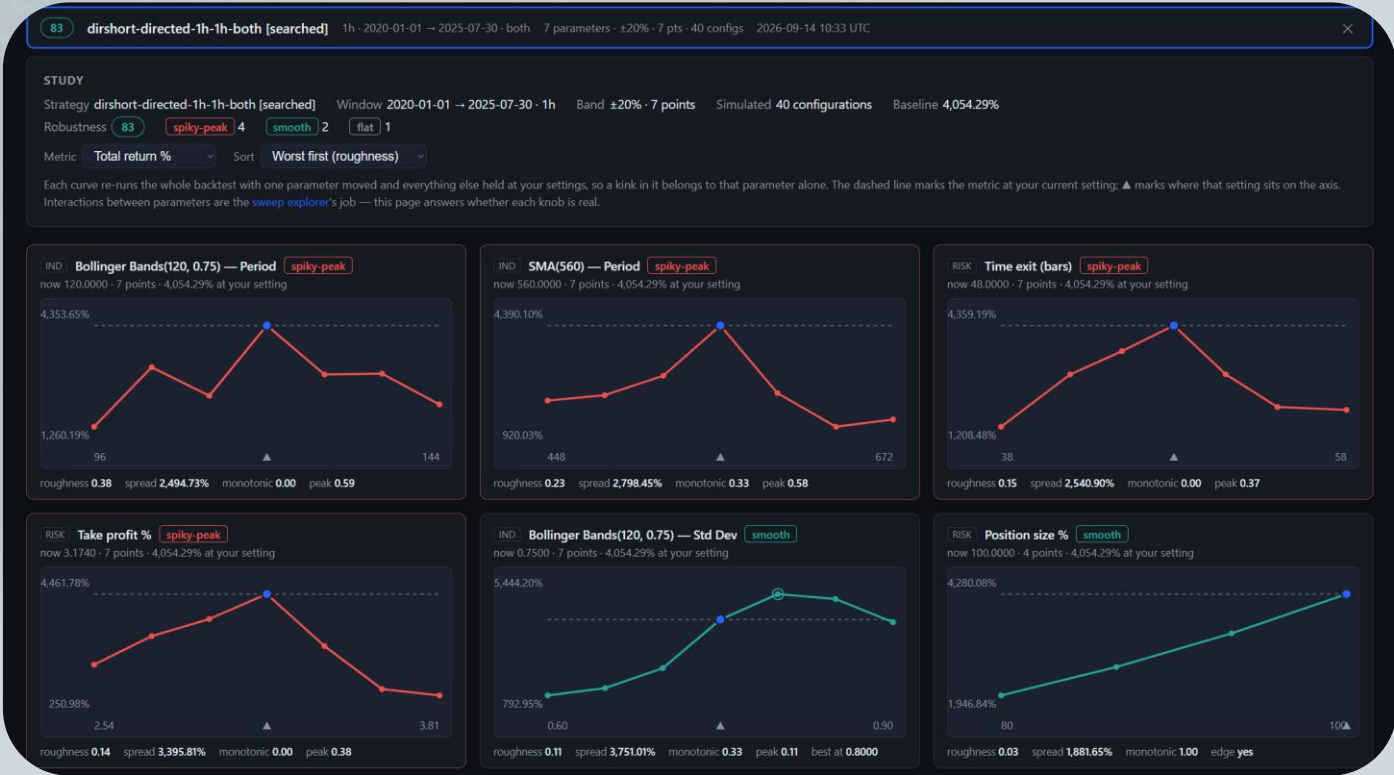

Aim for the line in between: strong in tests and still strong live.

But possible.

When,

data is used correctly.

Let AI learn and iterate,
